Electronic data capture of explosives for the oil industry

Record keeping of explosives • Documentation of processes • Track and Trace • Business optimization and transparency • Avoidance of manual effort • Integration of compliance directives

TTE - developed for your needs

- efficient administration and tracing of explosives and assembled perforating guns
- meets your company's compliance requirements
- optimization of business processes, documentation and stock records
- integration and data exchange with 3rd party systems, like ERP software
- intuitive handling and low setup effort
- global availability of data
- flexible for the individual requirements of your business
- enhances the safety when dealing with explosives
- sturdy, handy devices according to highest industrial standards, suitable for extreme conditions
- ATEX devices available
- high degree of spreading of the solution guarantees security for the future

Your solution for the Oil industry

The software and hardware solution TTE provides a simple way of data capture for the oil industry. All processes like building and dissolving perforating guns will be improved by their accessibility and observation. You receive an exact overview about all used explosives and gun parts, operation sites and information of usage. This enables an optimization and transparency of your business processes in the oil industry.

The electronic solution guarantees best control of stock keeping of your company's explosives by complying with national or company specific regulations. With the integrated data exchange all information about explosives and delivery data can be sent easily from vendor to client.

Complete tracking and tracing of explosives is supported by TTE and adapted to national legal requirements. No more hunting and collecting data is necessary. Reports and documentation can immediately and automatically be generated and printed by TTE.
